# DURST WORKFLOW — A REVOLUTIONARY ALL-IN-ONE SOLUTION FOR THE PREPRESS AND PRODUCTION PROCESS

---

## ONLINE AND EVERYWHERE

- > Browser-based solution combining data preparation, output preparation and color management to ensure high quality production in the shortest possible time.
- > Modern and easy-to-use interface allows multiple users with customizable permissions to work in parallel on the same database.

## EASY DATA MANAGEMENT

- > Structured management of projects, orders and production jobs including a digital production card.
- > Automatic preflight generates print ready files, including ink consumption for each print file.
- > Specific status can be assigned to print data, orders and production jobs, which allowing tracking of production.

## ACCURATE AND CONSISTENT COLORS

- > Color matching toolbox for spot colors and applying color corrections based on color books, grid charts, customer specific libraries and supporting CxF
- > Easy management of customized color libraries and customer specific spot colors.

## PROVEN TECHNOLOGY

- > High quality printing with clean, solid colors, neutral grey axis and individual defined black point, precise color adjustment and control.
- > State of the art core technologies — powered by Global Graphics, Callas Software and Color Logic — ensure highest quality and performance.

## INTEGRATION

- > Durst Workflow can be integrated into the leading ERP/MIS environment to synchronize production and financial data.
- > Integration allows users to automate print job creation and sending all job relevant data from an ERP system to the Durst Workflow.

## PARALLEL RIPPING

- > The integrated Harlequin RIP is optimized for parallel processing of multiple production jobs.
- > Intelligent PDF analysis to improve ripping speed.

# USING DURST WORKFLOW

---

Durst Workflow is a browser-based prepress and print production solution combining data preparation, color management and output preparation to ensure efficient production with optimal results in the shortest possible time.

---

## CHECK IN PROCESS

A preflight checks all print data for printing suitability. The rules can be individually adapted for specific processes. In order to provide a basis for production decisions regarding ink consumption, ink costs can be calculated after the check-in process for individual print files.

## DATA HANDLING/PREPRESS

Specific status can be assigned to print data, orders and production jobs, which allows production progress to be tracked. If errors or warnings occur during preflight or production process, they are visualized in an easily-understandable manner. In order to be able to carry out the daily prepress work directly in the Durst Workflow, over 100 corrections are made available to the user. These include resizing and calculating distortions, spot color adjustment, creating cutting information, creating white or varnish forms, controlling overprint behavior, converting fonts to paths, rotating or mirroring print data, controlling the definition of black, and trimming print data based on the cut line to minimize ink consumption. The corrections can be adapted and extended by the user.

The creation and rendering of variable data can be handled by the user directly in the Durst Workflow. Content such as serial numbers, color areas, image data, bar codes

and QR codes can be designed and applied using Durst's Adobe Illustrator Plug-In. Once processing is complete, individual print approvals can be created and sent to the customer. In the Durst Workflow, the emphasis is placed on the structured management of orders, print data and substrates. The substrate profiling must be carried out for every material and print combination for optimal print quality. During profiling, maximum flexibility is offered for black composition, color reduction, precise spot color calculation and optimum use of additional colors.

## PRODUCTION JOB

After production job creation, assignment of materials and precise color profiles, the final imposition can be realized. Impose modes such as manual, step and repeat, nesting, tiling and ganging are provided in the Durst Workflow. Templates can be fully customized which ultimately reduces time needed to test and adjust die forms, creating an efficient and streamlined workflow. Once assembly has been completed, the job is ready for printing. The integrated Harlequin RIP is optimized for parallel processing of multiple production jobs and of adapted dither algorithms from different printing systems.

# DURST WORKFLOW PRINT

Get the maximum out of the printer!  
Simplify production, customize processes and  
bring your productivity to a new level.

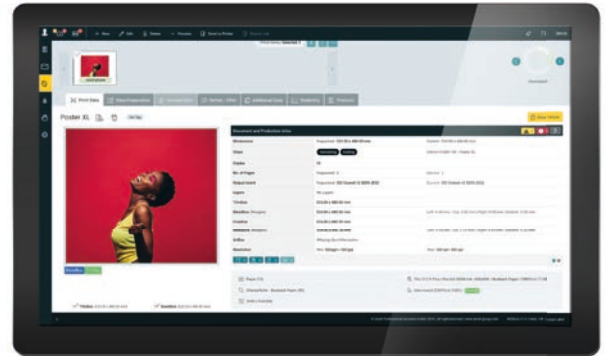

---

# DURST WORKFLOW PRINT — HIGHLIGHTS

---

## PREFLIGHT

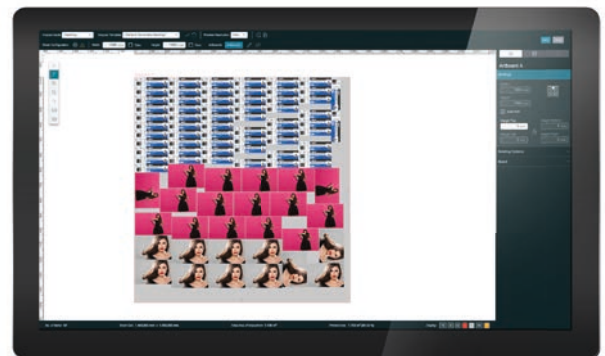

After uploading, print data is checked for errors or critical production problems using Durst's prefabricated controlling profile. If other factors are to be checked, they can also be activated in the preflight profile. Warnings and errors are displayed to the user in a clear, legible form.

---

## IMPOSER

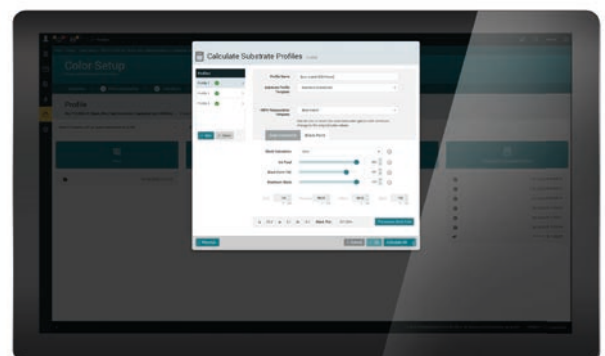

In order to adapt to the production process and minimize material waste, impositions must be created in an optimized form. Depending on the process, step and repeat, nesting, tiling as well as manual imposition modes can be selected. An imposition can be created directly in the browser and the ability to create and save custom templates is also a feature.

---

## PROFILE — INK SAVING

Sophisticated options are available for optimizing the ink-application or for controlling the black build-up and the grey axis, which can be used for profile calculation. Different profiles can be created for one set of measurement data, which can be used in production depending on the subject. A reduction of up to 20% can be achieved quickly and realistically.

# DURST WORKFLOW PLUS

A complete solution for flexible and  
productive data preparation with personalized  
analysis of your your print data.

---

# DURST WORKFLOW PLUS — HIGHLIGHTS

---

## APPROVAL REPORT

The user can create an approval report and send it to the customer or use it internally in the company. Behind the report is an Adobe InDesign template and the user can define his own layout and which information should be shown. The user can create and manage customer-specific reports. There is also the possibility to create an ink consumption report.

---

## DATA PREPARATION

The solutions enables the user to create and manage print data exclusively in the browser without using other programs by providing more than 100 corrections (fix-ups). Changing sizes, creating dies, adding additional bleeds as well as white or lacquer forms and processing spot colors are the core working steps. It is also possible to create and upload your own customer-specific fixups at any time.

---

## INK CONSUMPTION

When print data is uploaded, a complete check and normalization of the data, which can be configured by the user, as well as calculation of ink consumption for the print file is carried out. Whether the production is cheaper only with CMYK or with the use of the additional light or process colors can be calculated immediately. The essential factor, ink price, is hence immediately available in the system.

# DURST WORKFLOW VERSION

Color Management	Profiling, adaptation of the ink application to printer and material in order to output an image true to color Pre-Linearization   Linearization   Ink Limit   Profiling Reprofiling   Profiling Templates		
Color Matching	Color customization of a template or customer request without changing the profile or the original file Manually   Measuring   Substrate Mapping   Customer Mapping		
Color Corrections	Application of additional color corrections for output Adapt Color During Output   Image and Curve-based   Substrate Specific   Job Specific		
User Management	User Administration to control access and viewing rights User   Roles		
Multi User	Multiple users can access and work on the workflow at the same time via their browser Up to 3 users can work in parallel		
Filter and Search	Criteria-based filtering and searching of content/lists Customized Filter for Listings		
Hotfolder	The starting point for automated uploads, print data preparation (fixups) and output Supported Fileformats: PDF   AI   JPG   TIF   Support for Imposition Color Correction		
Production Job	Print preparation with impose and Colorimetric output Create   Force Print   Impose   Send to Printer		
Preflight	Automated analysis of print data with reports (warning and error) Print Item View   Highlight Errors		
Print Statistic	Information for the Printed Production Job sqm   Quantity   Time   Operator   Ink Consumption		
Impose	The creation of assemblies of single-varieties and mixed forms Manual   Step and Repeat   Nesting   Tiling		
Status	Manual and automated tracking of processing steps and production status Production Job   Article   Order   Print Item   Production Job		
XML-Hotfolder	The starting point for automated uploads, print data preparation (fixups) and output Support for XML: Create Production Jobs based on XML		
Customer	Store Company and Customer Information General Data   Contacts   Addresses   Orders		
Article	Flexible and extended print data storage for managing products, projects and customer data Collection   Process Steps   Tagging   Lock   Set as Unavailable		
Order	Management of print data in customer orders Managing Order   Order Item   Print Item and Additional Data   Digital Job Folder		

Data Preparation	<b>Segment-specific corrections for print data preparation</b> 100 Fixups   Segment Specific Pre-defined Sets   Configurable Upload Customized Fixups   Apply to Single Print Item   Apply to Multiple Items		■
Versioning	<b>Print data version control for tracking and recovery</b> Store of Data Preparation Versions   Revision Tracking		■
Report	<b>Creation of personalized reports regarding print-relevant information</b> Download PDF-Report   Approval Report   Customizable   Ink Consumption Report		■
Correct All	<b>Apply corrections to multiple print data</b>		■
Ink Consumption	<b>Print data based calculation of ink consumption starting with the upload</b> Print Item		■
Color Matching Toolbox	<b>Creation of a Color Grid Chart based on a chosen base color for visual comparison</b> Creation   Print   Measure <b>Creation of Color Books per material for color libraries and customer color definitions</b> Creation Color Book   Definition Color Books   Print		■
Illustrator Plug-In	<b>Extension to Adobe Illustrator for checking in and out of print data</b> Create Print Item for the Workflow   Check-out and Check-in Print Items   Directly from the Workflow   Define White   Set Trim and Bleed		■

## ADD-ONS

Additional Process Color	<b>Use of additional gamut-enhancing colors</b> Color management support for additional colors PCA (O, V, G, Red, Blue, etc.) (not White)	■	■
Extended Multi User Support	<b>Additional users can work simultaneously with the workflow</b>	■	■
HHR Speed Upgrade	<b>Faster processing of Multipage and VDP jobs</b> Additional 8 Threads (4 Siblings 2 Threads or 8 Siblings a 1 Thread)	■	■
Static Barcode	<b>Generation of barcodes optimized for digital printing in Adobe Illustrator</b> Add a Static Barcode to a Print Item		■
Illustrator Plug-In for VDP	<b>Create variable content within Adobe Illustrator</b> Add VDP (Barcode, Serial Number   Text   Images   Colored Shapes) based on rules or CSV		■
Rest API	<b>Uni-directional integration between ERP / MIS and Durst Workflow</b> Sending requests from MIS/ERP/Web2Production to Durst Workflow Print		■
Durst Integrate	<b>Bi-directional integration between ERP/MIS and Durst Workflow</b> Comm. Server to integrate MIS/ERP/Web2Production		■

# DURST ANALYTICS

---

Durst Analytics is a browser-based solution to analyze the production data and to monitor the printing systems.

---

The software helps to increase transparency of your production output. Users can view their most important print production data via a web browser interface from virtually anywhere.

## DURST ANALYTICS HIGHLIGHTS

- > Productivity and print job statistics.
- > Daily production figures.
- > Current status of the printing system.
- > Monitoring critical issues to prevent down time.
- > Monitoring of the printer availability.
- > Enabeling faster reaction times for trouble shooting and support.

---

## DURST ANALYTICS PLUS

Utilizing a server-based system to connect all printers equipped with Durst Analytics and to make the data available to production planning or ERP systems.

## HIGHLIGHTS DURST ANALYTICS PLUS

- > Management of multiple printers.
- > Interface for integration of analytics to production planning or EPR systems.

# DURST ANALYTICS VERSION

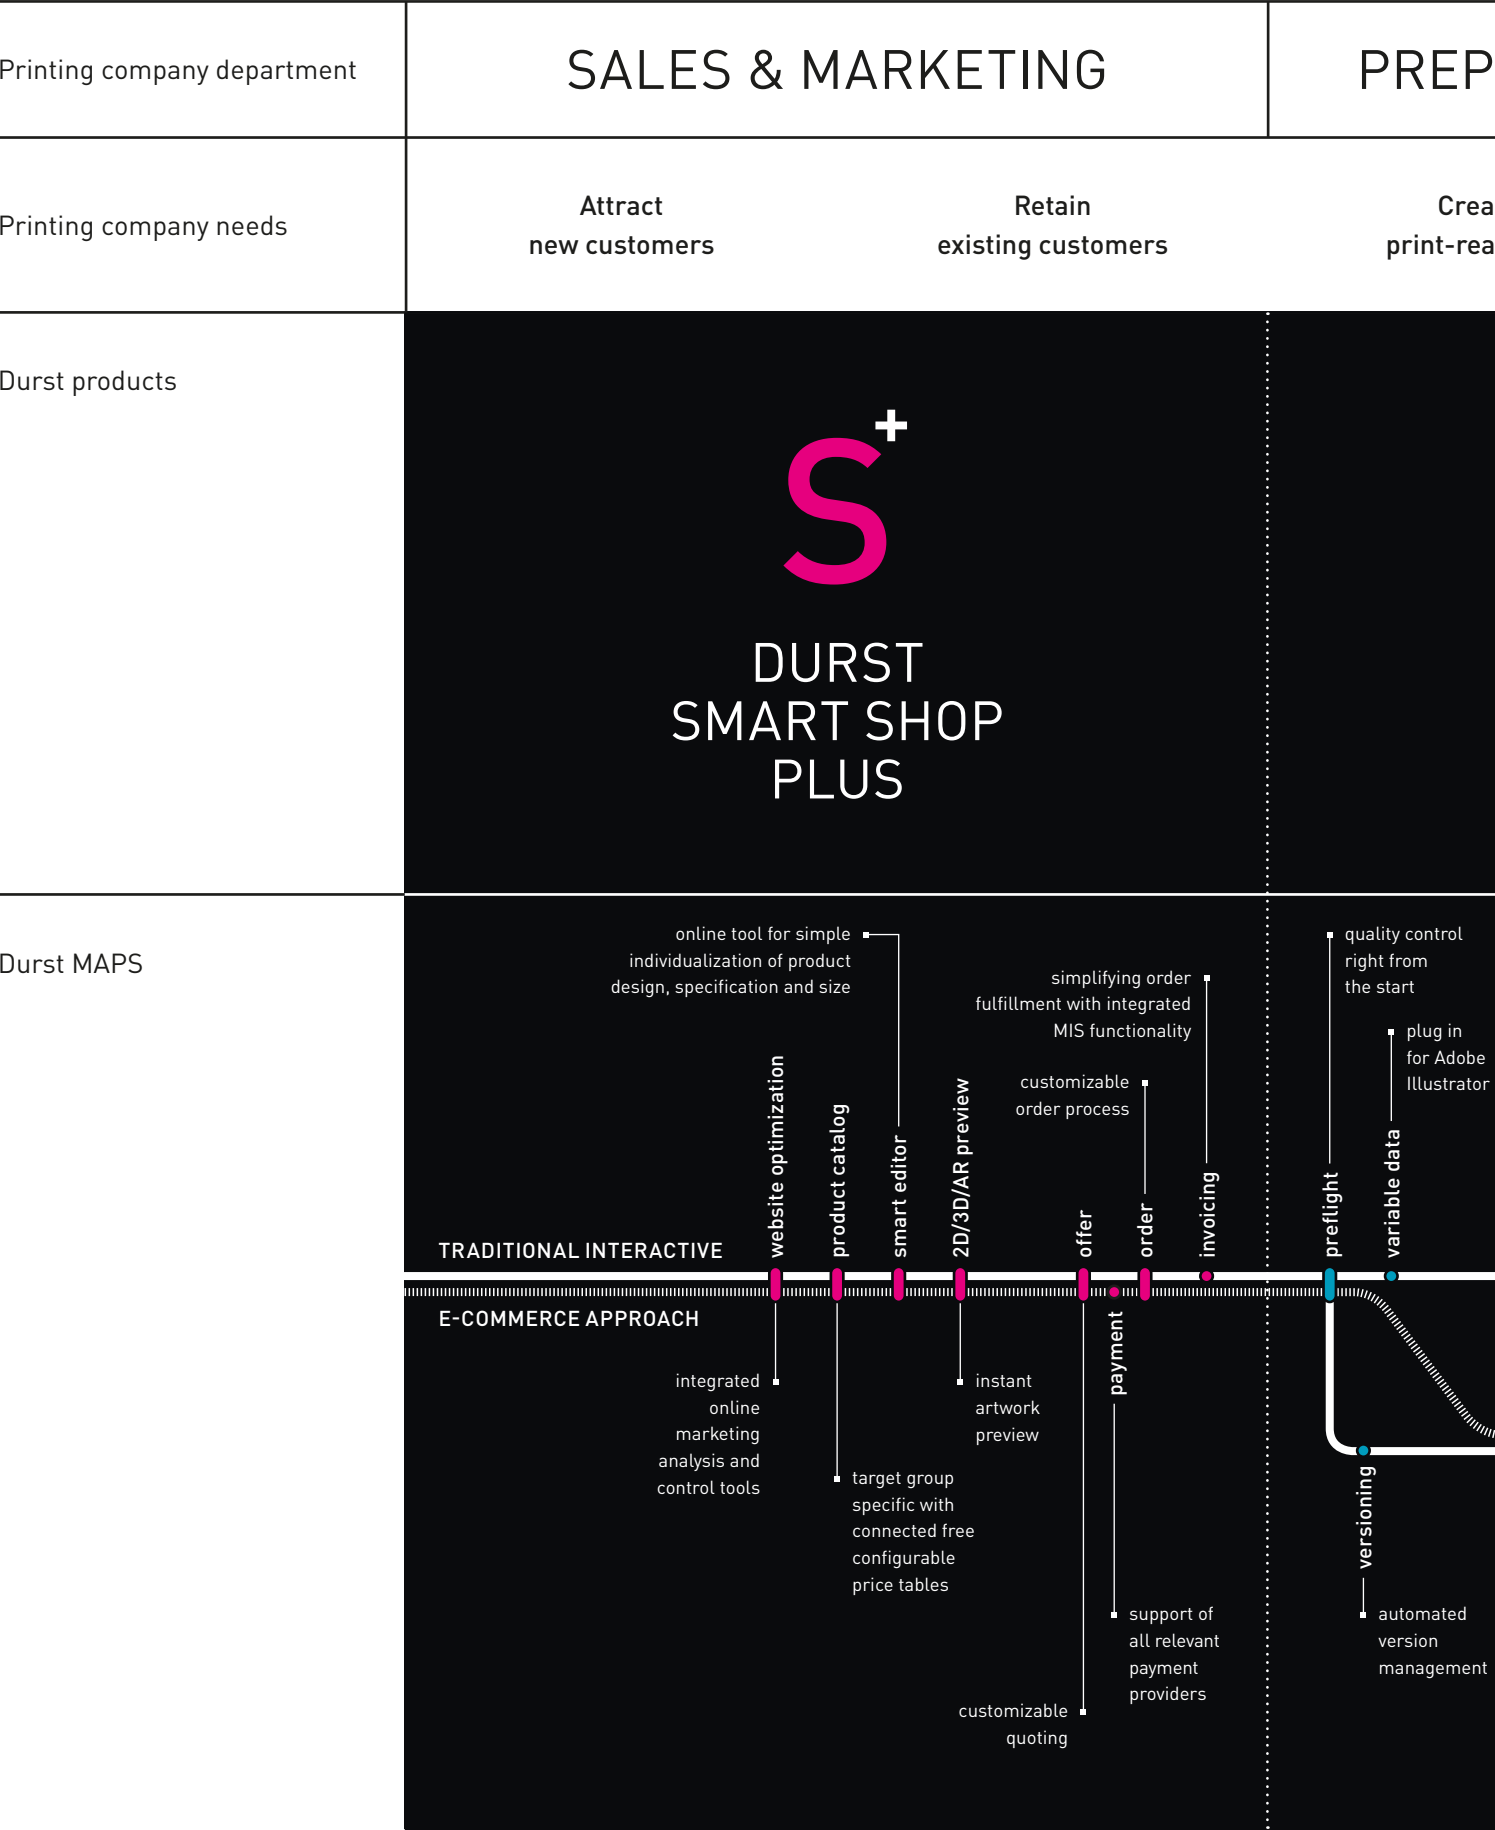

Printer Status	Information about the current printer Status Printing   Standby   Setup   Breakdown		
Time Filter	Choose start- and end-point for shown time period Today   This Week   This Month   History (for amount of days, max 365 days)		
Ink Levels	Visualize the current ink level for all available Inks in this specific printer Batch nr.   Bar code   Ink Filling Date   Ink Expiration Date
